

Flex the X

Scale Without Limits

Built to Scale for Today's Demands and Tomorrow's Growth

In today's digital landscape, organizations must think ahead. Xsight's X2 switch enables customers to meet current performance demands while preparing for tomorrow's networking requirements.

Investing in the Future

As network requirements evolve, the X2 evolves with them. Whether supporting new workloads, adopting emerging protocols, or scaling to higher throughputs, the X2 protects existing investments without technology replacement.

Smarter Power at Scale

The X2 combines high performance with power efficiency, helping customers reduce energy consumption and operational costs as data center demands continue to grow.

Built to Scale and Adapt

The X2 empowers customers to troubleshoot network failures with little to no downtime while supporting emerging capabilities and standards, including Ultra Ethernet Consortium (UEC) compliance.

Xsight Labs demonstrates that efficient, programmable, high-performance networking can scale and evolve alongside the needs of modern data centers.

The X2 delivers value today while preparing customers for tomorrow.
